

Editorial

Special Edition on Bionanotechnology

Dear Colleagues,

The ever growing applications of nanotechnology in medicine prompted the Chettinad Health Chettinad Health City Medical Journal to bring out special issue on nanotechnology in medicine. The overwhelming response from the authors had resulted in many interesting articles covering the wide spectrum of biomedical nanotechnology. I am glad to know that the editorial board of Chettinad Health City Medical Journal has extended the scope by deciding to bring out another issue on the theme of nanotechnology in medicine.

The second issue has articles covering the interesting areas of nanosensors and their increasing importance in medicine. Green nanochemistry is another fast emerging field wherein the unique properties associated with the nanoparticles prepared by green synthesis routes can be exploited to reduce the toxicity and enhance the efficacy. These articles will infuse interest to explore the vast natural

resources of the nation to come up with novel green synthesis agents.

I am confident that the second issue will also enjoy similar patronage as of the previous issue. I am thankful to the authors who have contributed to this second issue and the editorial board of Chettinad Health City Medical Journal for its timely effort in bringing out the issue.

Prof. R. Murugesan

Director – Research,
Chettinad Academy of Research and Education
